

LAB ASSIGNMENT: HTML5 & CSS

Instructions:

- This assignment must be completed in groups.
- Every group member is expected to actively participate in the work.
- Each group will present their work during the lab sessions.
- All group members should be able to clearly explain the code and demonstrate their understanding
- This assignment contributes 10 marks toward the final continuous assessment.

Part 1: HTML5 Structure with Semantic Elements

Use semantic elements: header, nav, main, section, article, aside, footer.

Build a simple website for “Community Health Information System” including:

- Header with system name
- Navigation menu (Home, About, Services, Contact)
- At least 2 sections with 1–2 articles each
- Sidebar with quick links or announcements
- Footer with copyright info

Part 2: Basic CSS Styling

- Background colors
- Font styles
- Spacing (margin & padding)
- Borders and shadows
- Horizontal navigation menu
- Hover effects
- Styled article cards

Part 3: Layout with Flexbox

Use Flexbox for:

- Navigation alignment
- Arranging articles side-by-side
- Aligning sidebar and main content

Part 4: Layout with CSS Grid

Use CSS Grid to structure:

- Header, Navigation, Main, Sidebar, Footer
- Example layout using grid-template-areas

Part 5: Advanced CSS Features

- Transitions for smooth hover effects
- Animations using keyframes
- Responsive design using media queries
- Advanced selectors like :hover, :nth-child(), ::before, ::after
